Marketing Performance

Objective: Compare onboarding completion across acquisition channels.

Completion Rate by Acquisition_Channel

Facebook delivers the highest onboarding conversion (69.56%), while Instagram attracts the most users but converts only 50.42%, suggesting an opportunity to improve campaign quality or onboarding alignment.

Product Experience

Objective: Assess whether device type and app version affect onboarding success.

Completion Rate by Device

iPhone users, particularly on App Version 4.2.1, experience substantially lower onboarding success, indicating a likely product or release-specific issue.

Completion Rate by App_Version

Customer Experience

Objective: Examine the relationship between customer support, satisfaction and onboarding completion.

Completion Rate by Support_Ticket

Customer satisfaction is strongly associated with successful onboarding, while support ticket creation has little relationship with completion.

Executive Summary

This analysis examined the onboarding journey of 10,000 PFinance users to identify factors influencing successful customer activation.

Overall onboarding completion is 63.87%, indicating that more than one-third of users abandon the process before activation. The analysis highlights three priority opportunities:

- Improve onboarding for iPhone users, particularly those using App Version 4.2.1.
- Review Instagram acquisition campaigns to improve onboarding quality.
- Reduce friction throughout the onboarding journey to increase activation.

Based on the assumptions used in this analysis, increasing onboarding completion to 70% could generate approximately ₦556,000 in additional revenue.
